SSL WEB FILTERING USER GUIDE

ANDROID

1.   SSL Web Filtering

In order to enable HTTPS (SSL) inspection for a safer and more secure web filtering experience, an "Updata Infrastructure UK Ltd" SSL certificate will need to be installed on your equipment.

The following guide shows how this can be done by installing it within the Android mobile device. Other guides for other browsers are available at http://ssl-filtering.updata.net

2.   Download the Updata security certificate on each device

- Open the web browser (eg Chrome) and navigate to http://ssl-filtering.updata.net/
- Click on the "Download Certificate" button
- Type the name "Updata CA Certificate" and touch "OK".
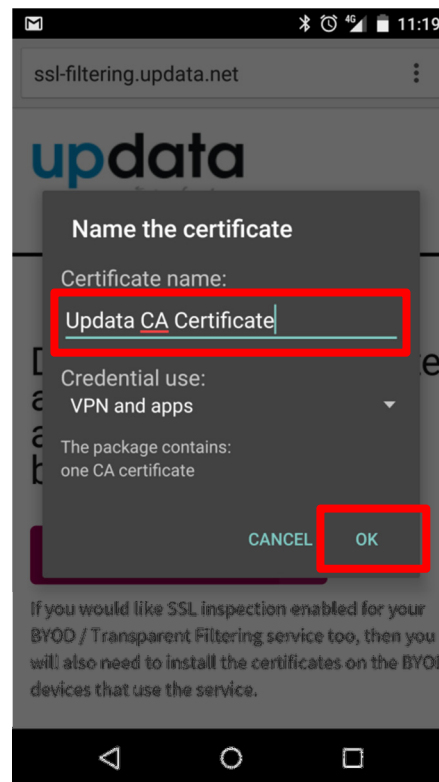

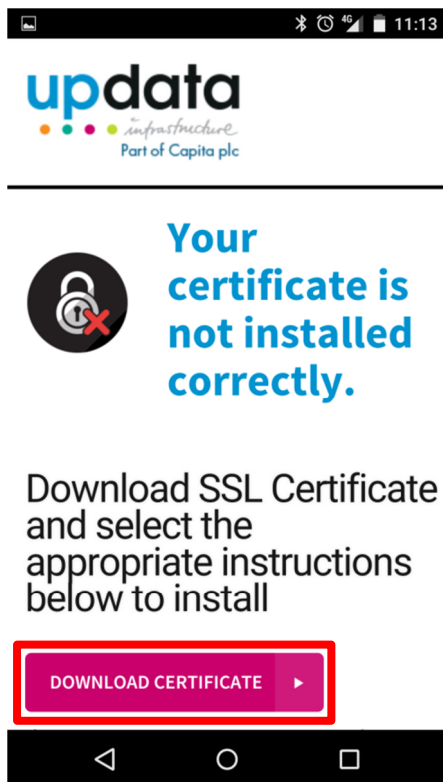

Note: <u>All</u> end user devices require the installation of an SSL certificate.

Part of Capita plc

3.   To enable SSL filtering at the school site

- Once you have completed this installation on <u>ALL</u> end user devices, please call the Updata service desk on **08455 650 560** or email **customer.support@updata.net** to get your SSL filtering enabled.

- Hertfordshire schools will need to email **sitss.internet@lea.herts.sch.uk** for SSL inspection to be turned on.

- **Important Note:** All devises that join the network will require the one-time installation of the SSL Certificate. This means that any future new or replacement devices will also need this SSL certificate to be installed on them.
